Weekly Activity and Progress Report – CS 440 Group 1 for Week 5

Group Members: Diego Bravo, Nicholas Filipov, Jose Bolanos, Alejandro Bravo

Weekly In-Person Review Meeting

- When: 9/25/2024
- Where: UIC Library
- Missing (why) : None
- Late (why) : None

Recent Progress

- Diego Bravo: Met with group members for weekly in-person meeting. Added resources to the Coding Project such as icons and a navigation menu. Fixed errors and tweaked element IDs for better clarity in programming UI. Created, styled, and added content to slideshow presentation for the Development Project.
- Nicholas Filipov: Met with group members to discuss what we are working on. Made a virtual machine and made a sql database on the machine to store the user information on it. Made an account that android studios can access the database with and began writing code to connect it to the database.
- Jose Bolanos: Worked on the presitation slide show with my team. Also worked more on the UI page that is going to link other account to our Money Man program. Used jira to update my progress. Finally brainstormed a bit on what to write/keep writing for our ocean project report.
- Alejandro Bravo: Attended week 5 meeting at library. Edited user info screen to look more appealing. Used jira to update new issues and worked on presentation for ocean project.

Current Action Items (Work In Progress)

- Diego Bravo: I will implement the drawer navigation menu to each screen that requires it. Write up the Project Description for the Development Project. Help groupmates with backend tasks if needed. Tweak UI elements for better user experience.
- Nicholas Filipov: Finish connecting the sql database and make sure I can insert and select from the database. If not then I will make a new database using different tools to make it work. Begin connecting the textboxes and buttons so we can add new accounts and information and edit them through the app.
- Jose Bolanos: Keep working on the written report. Will also update our UI diagram to reflect the progress I have made/will keep making. Finally will finish the "link page" UI and help try to figure out how we will start accessing other account information, and how we will store user information.
- Alejandro Bravo: going to populate the user screen and be able to read it into the screen. Code the user info screen to allow the user to change account information. Add a dropdown menu to navigate through other pages much easier
